

The Rise of "Brave New China"

Xiao Qiang

University of California, Berkeley

A new generation of digital technology is being used to collect information and limit freedom of expression in China. From facial and voice recognition to DNA records and a ubiquitous network of surveillance cameras, China is marshaling artificial intelligence and big data techniques to exert even greater control over its population. This is the rise of a 'Brave New China.'

This lecture is presented by the Center for Asian and Pacific Studies and the Department of East Asian Languages and Literatures. It is co-sponsored by the College of Arts and Sciences, the Oregon Humanities Center, the UO Law School, the Asian Studies Program, and the Jonathan Marshal First Amendment Chair Endowment.
